

PROTECTING YOUR BUSINESS CRITICAL DATA

Are you prepared for the unexpected?

How would your business cope with unforeseen disaster - flood, fire, worse even? What if you lost or accidentally deleted important documents and files? Have you thought about how this would affect your business? We have.

Managed Backup protects your critical business data, minimises the possibility of data loss and keeps your business running by:

- Providing a comprehensive, ultra-secure Backup service
- Giving you quick, flexible access to data - when you need it
- Providing support to get you up and running if the worst happens
- Utilising a scalable solution that grows as your business grows
- Offering a low-maintenance, easy-to-use solution

We'll keep you connected to your data - whatever happens - and more importantly, we'll give you peace of mind. Priceless.

THE SOLUTION

We'll provide the protection your business needs. One solution for disaster recovery, backup and critical business data protection.

No more worrying about data protection. Managed Backup consists of three separate services that can be built up over time to give your data full protection that's tailored to your needs.

BASIC BACKUP	COMPREHENSIVE BACKUP	SYSTEMS RISK CONSULTING
Critical business machine backup (server; virtual machines etc)	Server and workstations backup	Quarterly risk audit
Daily reporting	Data archiving and continuity services	Planning and testing
Gives you peace of mind	Robust protection for all eventualities	Reduces risk of downtime

You can build up your protection a step at a time - or take all three services for maximum data security ensuring continuous availability of critical business data in the event of a major IT problem or disaster.

What does it cover?

- Backup
- Archiving
- Data access
- Recover and restore
- IT Governance
- Disaster recovery planning and consultancy

What can you expect from each service?

Service	What it does	Benefits
Basic Backup	Comprehensive backup for business-critical devices (Exchange servers, virtual machines etc) Assesses back up functionality Provides regular reporting	Ensures continuous, secure and flexible access to important data Flexible - works across numerous platforms Minimises risk of lost revenues
Comprehensive Backup	Backup individual workstations and other devices Multi-tier back up Archiving facility	No file EVER deleted You're in control - multiple backup schedules to suit Gives you priceless peace of mind
Systems Risk Consulting	Quarterly risk audit Continuity planning Continuity testing Policies and IT governance	Less downtime Safeguards your business Helps you plan and prepare for business continuity

How does it work?

Getting your data protected is easy. There is no hardware to install or any training required. It's easy to maintain and frees up your existing resources. Give our Managed Backup team a call and they'll get you started in no time.
